

BREG'S VISION CLOUD CONNECT AND REDOX

Improving the Efficiency of Durable Medical Equipment Placement with EHR Integration

Orthopedic braces are one of the most commonly used medical devices in patient treatment plans. For nearly 30 years, Breg has been developing innovative braces and practice solutions to help patients around the world recover faster and live better.

One of the largest health systems serving rural communities in Minnesota, Idaho, Wisconsin, and North Dakota, routinely uses Breg products in treatment plans. Like many health systems, doctors at this health system would manually document each step of the brace placement process within a patient's electronic health record (EHR)—in this case, Epic. From ordering, to placement, to inventory upkeep and insurance billing, the process was costly and ultimately low yield for physicians.

Integrating Vision Cloud Connect

The solution to this tedious process was Vision Cloud Connect, Breg's award winning Web and iOS application that automates the process of documenting, dispensing, and billing for durable medical equipment. Vision's success lies in its ability to seamlessly automate work within EHRs, making it efficient and intuitive to use. To be able to do this, cloud applications like Vision Cloud Connect must translate their technology to align with the technology used by EHRs. They must also ensure that patient data exchanged is secure and HIPAA compliant. These complex barriers make integration challenging and time consuming for applications like Vision. This is why Redox was brought in—by leveraging the Redox platform, Breg could build against a single standard that allowed their application to interoperate with

health systems in consistent data formats. Redox also ensures that all data exchanged adheres to HIPAA compliance laws and are stored securely. Having an integration partner to execute and maintain the technical work allowed Vision Cloud Connect to focus solely on their product, and integrate quickly.

Integration Made Easy

With Redox, it took only 15 days from initial connectivity setup to go-live, an astounding metric that is testament to the dedication all parties had in executing this project efficiently. Furthermore, Breg and the health system avoided a costly up front conversion, as Redox's approach allowed the health system to synch upcoming appointments months in advance. Using Redox to leverage time, connections, and cost, Vision Cloud Connect was able to accelerate the kick-off to go-live timelines and quickly deliver a world class health-tech solution.

“FOR US TO CONNECT TO AN EPIC HEALTH SYSTEM SO QUICKLY WAS AMAZING. BEING ABLE TO FOCUS ON OUR PRODUCT DURING THAT TIME AND NOT WORRY ABOUT HANDLING THE INTEGRATION WAS CRUCIAL TO OUR SUCCESS”

—Shari Matkin
Senior Product Manager

Vision Cloud Connect Today

With every order placed, Vision Cloud Connect maintains an up-to-date inventory stock, eliminating the need for someone to individually track each brace; it allows doctors to keep patients in-clinic for improved continuity of care; it posts the bills for braces directly to insurance companies, saving health systems the time and cost of handling it themselves. But most importantly, Vision Cloud Connect allows doctors' time to be spent on what matters most: high quality patient care.
